

About the Organization: IFP Petro Products Private Limited

IFP Petro Products Private Limited is an established Indian company with a strong presence in the field of re-refining of used oils. Since its inception in 1977, IFP has been a pioneer in promoting sustainability within the oil industry by converting used lubricating oil into high-quality re-refined base oil. Over the years, the company has built a reputation for responsible resource management, technological advancement, and environmental stewardship.

About DCQ Logistics

DCQ Logistics is a startup venture and a sister concern of IFP Petro Products Private Limited. The company focuses on developing innovative logistics and supply chain solutions to support the efficient collection and management of used oils (black oil). DCQ Logistics aims to streamline operational workflows, strengthen the collection network, and enable seamless coordination across multiple stakeholders through technology-driven systems and data integration. The initiative is designed to enhance efficiency, transparency, and scalability in the used oil collection ecosystem while supporting the broader sustainability mission led by IFP.

Job Description

Position	Software Developer (LAMP Stack)
Organization	DCQ Logistics Pvt. Ltd.
Objective of the position	We are looking for two highly skilled and execution-focused Software Developers to join our core engineering team. In this role, you will work directly alongside our Senior Technical Architect to build, scale, and maintain our proprietary logistics SaaS platform. If you have a deep mastery of the LAMP stack, a strong understanding of building secure APIs, and a background in logistics software, you will thrive in this environment.
Required Qualification	B.tech/B.E Computer Science
Required Experience	6+ years of hands-on professional experience developing web applications using the LAMP stack (Linux, Apache, MySQL, PHP).
Location	Hybrid/ Noida
Job Type	Full-Time
Compensation	These details are indicative and can be negotiated with the organization.

Key Responsibilities:-

- **SaaS Backend Development:** Write clean, highly efficient, and scalable backend code using PHP (Laravel or CodeIgniter) to support a high-volume, multi-tenant SaaS architecture.
- **API & Webhook Creation:** Build and maintain secure RESTful APIs and webhooks that allow our system to communicate flawlessly with third-party logistics tools, payment gateways, and external workflow automation systems.
- **Database Optimization:** Write complex, optimized SQL queries and assist in managing relational database schemas (MySQL/PostgreSQL) to ensure lightning-fast data retrieval for real-time logistics tracking.
- **Collaborative Engineering:** Work closely with the Senior Developer to execute the technical roadmap, participate in code reviews, and ensure all code adheres to strict performance and security standards.
- **Frontend Integration:** Collaborate seamlessly with front-end components, ensuring the data flow between the server and the user interface (HTML5, CSS3, JavaScript, Vue.js/React) is fast and reliable.

- **Bug Squashing & Maintenance:** Proactively identify edge cases, troubleshoot complex logistical logic errors, and maintain high system reliability.

Requirements & Qualifications

- **Core Technical Expertise:** 6+ years of hands-on professional experience developing web applications using the **LAMP stack** (Linux, Apache, MySQL, PHP).
- **Logistics Domain Experience (Highly Preferred):** Proven experience building software for the logistics, supply chain, ERP, or fleet management industries. You should understand the nuances of tracking, routing, and operational data flows.
- **SaaS Experience:** Previous experience contributing to a SaaS product, with an understanding of multi-tenancy, user permission tiers, and scalable cloud architecture.
- **API Proficiency:** Deep understanding of JSON, RESTful architecture, and building secure endpoints that external applications can reliably consume.
- **Version Control & Agile:** Strong proficiency in Git and experience working in sprint-based Agile environments.
- **Autonomous Execution:** Ability to take a technical spec from the Senior Developer and execute it flawlessly with minimal micromanagement.

What We Offer

- Competitive salary tailored to your experience.
- The rare opportunity to be a foundational engineer on a patented, tech-first SaaS product.
- A collaborative, no-bureaucracy environment where the best ideas win.
- Health insurance, paid time off, and continuous learning opportunities.
